Reference: Part 1 application posted on 29 October 2020

Ottawa, 12 January 2021

Canadian Broadcasting Corporation
Vancouver, British Columbia

Public record for this application: 2020-0731-9

CBU-FM Vancouver – Technical changes

1. The Commission has the authority, pursuant to section 9(1) of the *Broadcasting Act* (the Act), to issue licences for such terms not exceeding seven years and in the case of the Canadian Broadcasting Corporation (CBC), subject to such conditions as the Commission deems consistent with the provision of the programming contemplated by sections 3(1)(l) and 3(1)(m) of the Act, as well as to amend those conditions on application of the licensee.
2. Consistent with this authority, the Commission **approves** the application by the CBC to change the authorized contours of the English-language radio programming undertaking CBU-FM Vancouver, British Columbia, by increasing the average effective radiated power (ERP) from 31,722 to 31,740 watts, decreasing the maximum ERP from 95,800 to 95,485 watts, increasing the effective height of the antenna above average terrain from 610.1 to 610.8 metres and amending the coordinates of the transmitter site. All other technical parameters will remain unchanged.
3. The Commission did not receive any interventions in regard to this application.
4. When requesting technical changes, licensees are generally required to demonstrate a technical or economic need. The CBC indicated that the parameters and coordinates of the existing transmitter are inaccurate and wishes to provide the Commission with the as-built technical parameters for CBU-FM's service. The Commission is satisfied that the licensee has demonstrated a technical need for the requested technical changes.
5. The Commission notes that the implementation of the technical changes will have a negligible impact on the population served by the station, which would decrease from 2,704,546 to 2,697,829 (-0.25%) within its primary (3 mV/m) contour and from 3,358,410 to 3,357,561 (-0.03%) within its secondary (0.5 mV/m) contour.
6. Pursuant to section 22(1) of the Act, this authority will be effective only when the Department of Industry notifies the Commission that its technical requirements have been met and that a broadcasting certificate will be issued.

7. As set out in section 16 of the *Radio Regulations, 1986* (the Regulations), all radio station licensees have obligations relating to the broadcast of emergency alert messages received from the National Alert Aggregation and Dissemination System. In regard to the changes to CBU-FM's authorized contours approved in this decision, the Commission reminds CBC that continued compliance with section 16 of the Regulations may require that any alert broadcast decoders (e.g., ENDEC) used for the purposes of broadcasting emergency alert messages on that station be reprogrammed to properly account for the new authorized contours.

Secretary General

This decision is to be appended to the licence.
